## **Dial from Microsoft Outlook (Contacts) or from other TAPI supported systems**

Miralix has developed Miralix TAPI Client, which is an add-on application for the Miralix CSTA Server. Miralix TAPI Client is used as the link between the TAPI 2.0 (or higher) supported systems and the NEC Philips 2000IPS and NEC Philips iS3000 PBX.

For example Microsoft Outlook has a build-in functionality which makes it possible, via the Miralix TAPI Client, to make a direct call to one of the contacts in Outlook without dialling the number on the phone.

Miralix TAPI Client can identify incoming A-numbers. Therefore a TAPI supported CRM system has the ability to use the A-number identification to display information related to the A-number on a PC screen. If it is supported the user will be able to make outgoing calls directly from the TAPI supported system as well.

Please feel free to contact me for more information about this smart and useful product or visit our newly designed homepage: [www.miralix.com](http://www.miralix.com)
