

Miralix Voice2Disc®

Miralix develops software for integration of telephony and data, with the purpose to make the working process easier and to improve the efficiency level in the company.

The concept is based upon the motto; "it's that easy".

The solutions are very user-friendly and useful for the company, who wants to provide great service and efficiency towards the customers.

Many companies need to record phone conversations for further documentation, archive material or as sales training.

Miralix has developed a product that via a web interface give the employees the possibility to record their telephone conversations and store them in standard audio files for later use.

The user:

Miralix Voice2Disc is via the secured web interface easy to use. Via the web interface the user is able to record, find, listen and delete his own audio files.

The administrator

An administrator web interface is included in the Miralix Voice2Disc package. Users can i.e. be created and deleted in the administrator web interface.

The audio files can be listened to through the users own standard sound system in their PC.

With Miralix Voice2Disc your company will have a digital recording system that stores your telephone conversations directly in your own standard file system. The recording system enables your company to obtain a clear overview over the employees recorded telephone conversations. For the users it is easy to find the wanted recording and use it for the right purpose.

Miralix Voice2Disc has as standard a configuration that provides the company with the possibility to record 2 telephone conversations at the same time. If required Miralix Voice2Disc can be enlarged to record more simultaneously Telephone conversations.

System requirements:

PC with Windows 2000 Pro or XP Pro, Philips iS3000 with Call@Net and DTXi ports.

Miralix reserves the right to change the functionality without notice, and is not liable for errors or omissions in this information.
